EGE ERENLER

Software & Data Engineer

London, UK | salih2000ege@gmail.com | Right to Work in the UK
egeerenler.com | linkedin.com/in/ege-erenler | github.com/EgeErenler

PROFESSIONAL SUMMARY

Software and data engineer with over two years of experience building data-driven applications, REST APIs and data pipelines. As a freelance developer, delivered a sales incentive app end to end for a multinational FMCG company, used by around 300 people and still in use. Improved SQL query and reporting performance by up to 20% at Orion Innovation. Builds live, automated data products, including an electricity demand forecast within a quarter of a point of the national grid operator's accuracy. Holds an MSc in Data Science in Business and a BSc in Software Engineering.

EXPERIENCE

Sokian Limited **London, UK (Remote)**
Freelance Software & Data Developer *Sep 2024 - Aug 2025*
Client: multinational FMCG company (confidential)

- Delivered a sales incentive mobile app end to end for an FMCG client, from requirements and design to testing, launch and a year of support
- Built daily, rule-based regional and national rankings from the client's uploaded sales data for a year-long market-share programme with 11 regional managers, 42 sales supervisors and around 250 sales reps
- Built the cross-platform app in React Native (Expo) and TypeScript, with live leaderboards, sales competitions and reward tiers
- Built Python ETL pipelines into MySQL and FastAPI REST APIs on Microsoft Azure to serve sales data and KPIs to sales teams and managers
- Worked with the client's trade marketing team and shipped quarterly releases: rule changes, video uploads and a sales-team chat; the client still uses the app for other brands

Orion Innovation **Istanbul, Turkey**
Junior Software Engineer *Sep 2023 - Aug 2024*

- Improved SQL query and reporting performance by up to 20% by redesigning and optimising MySQL databases for analytics workloads
- Saved several hours of manual work per week by automating internal reporting workflows and dashboards
- Built and deployed data-driven applications on AWS and Azure in Agile, cross-functional teams, using Jira and Git
- Monitored performance and data quality across production pipelines to keep systems reliable

Mikrogrup (Financial Software) **Istanbul, Turkey**
Software Engineer Intern *Feb 2023 - Aug 2023*

- Developed backend logic in Python and SQL for financial and accounting reporting features
- Optimised database structures to improve reliability and reporting efficiency
- Monitored system and data performance with Site24x7 and supported backup and data security processes

EDUCATION

Regent's University London **London, UK**
MSc Data Science in Business *Sep 2025 - Oct 2026*

- Consultancy project: analysed 67,500 point-of-sale transactions (£494k revenue) in Python, validated customer segments with statistical tests ($p < 0.01$) and delivered a costed plan to a real client
- Built Power BI and Tableau dashboards and applied machine learning to business datasets

Bahçeşehir University **Istanbul, Turkey**
BSc Software Engineering *2019 - Jun 2024*

- Capstone: segmented GWI survey data with K-Means clustering in Python to build four customer personas

PROJECTS

Live demos: egeerenler.com | Code: github.com/EgeErenler

Scoretime, Live Sports Scores App scoretime.app

- Building a cross-platform live scores app for UK sports fans in React Native, Expo and TypeScript, backed by a FastAPI service deployed with Docker (api.scoretime.app)

- Built a nightly Python pipeline into DuckDB that merges 8 public sources into more than 530,000 football matches plus F1, tennis and cricket, with cross-source team matching and 17 automated data quality checks
- Stack: TypeScript, React Native, Expo, Python, FastAPI, DuckDB, Docker, GitHub Actions

UK Energy Demand Forecast egeerenler.com/uk-energy-forecast

- Forecast GB electricity demand every half hour, a day ahead, with LightGBM quantile models: 3.17% MAPE against the national operator's 2.93% (NESO) and an 8.52% seasonal baseline, over a 30,568 half-hour backtest
- Automated daily data collection, retraining and publishing with GitHub Actions, and served forecasts through a Dockerised FastAPI service with MLflow experiment tracking
- Stack: Python, LightGBM, pandas, FastAPI, Docker, MLflow, pytest, GitHub Actions

London Pulse, Real-Time City Data Pipeline egeerenler.com/london-pulse

- Built an automated pipeline that collects TfL Tube status, Santander Cycles, weather and air quality every 15 minutes, stores it as Parquet and models it in dbt on DuckDB
- Covered every dbt model with data tests and published the results to a live dashboard
- Stack: Python, dbt, DuckDB, Parquet, pytest, GitHub Actions, ECharts, Leaflet

UK Housing Market Analytics egeerenler.com/uk-housing-analytics

- Analysed 7 million HM Land Registry property sales with tested SQL (window functions, repeat-sales returns), showing London prices rose 13% from 2018 to 2025 against 27% elsewhere
- Stack: SQL, DuckDB, Python, pytest, GitHub Actions

London Property Finder egeerenler.com/london-property-finder

- Built a public web app that ranks about 38,000 London streets on price, rental yield, growth, crime, transport and schools, using 7 open data sources rebuilt daily
- Stack: Python, DuckDB, JavaScript, Leaflet, Geospatial Analysis, GitHub Actions

MediPulse AI, AI Health Triage Chatbot (MSc Project) medipulse-ai.streamlit.app

- Integrated LLaMA 3.3 (70B) via the Groq API with prompts built around NHS triage guidance and rule-based decision trees; deployed on Streamlit Cloud with CI/CD (academic prototype)
- Stack: Python, Streamlit, Groq API, Landbot

Expense Tracker github.com/EgeErenler/expense-tracker

- Built a personal finance tool that stores every payment in SQLite and charts spending by category and month
- Stack: Python, SQLite

SKILLS

Languages: Python, TypeScript, SQL, JavaScript, Java

Frameworks & Libraries: React Native, Expo, FastAPI, pandas, NumPy, scikit-learn, LightGBM, Streamlit

Data Engineering: ETL/ELT Pipelines, dbt, DuckDB, MySQL, PostgreSQL, Parquet, Data Modelling, Data Quality Testing, Query Optimisation

Data Science & BI: Machine Learning, Time Series Forecasting, Statistical Analysis, Geospatial Analysis, MLflow, Power BI, Tableau

Cloud & DevOps: Microsoft Azure, AWS, Docker, GitHub Actions, CI/CD, Jenkins, Git, pytest, REST APIs, Agile, Jira

AI: LLM Integration (LLaMA 3.3 via Groq API), Prompt Engineering, Claude Code

CERTIFICATIONS

- Data Visualization with Python, IBM
- Requirements Gathering for Secure Software Development, University of Colorado
- Requirements Elicitation: Artifact and Stakeholder Analysis, University of Colorado
- Requirements Specifications: Goals and Conflict Analysis, University of Colorado
